

Fortifying Facilities: Prevent Diseases from Spreading

The flu season is upon us and stronger than ever with millions suffering from this frequently fatal illness. The virus travels through the air but lives on surfaces which makes proper surface disinfection a must!

How long can nasty viruses live on hard, non-porous surfaces? (YES... like your desk, your phone, your keyboard)

This flu season is worse than the 2009 H1N1 season, with widespread infection rates across 43 states and thousands of deaths attributed to the illness.
Center for Disease Control, Weekly Index, Feb. 3, 2018

Keep your facility - and your employees - healthy!

Disinfect all surfaces - daily!
Including desks, cabinets
salt/pepper shakers, water coolers
coffee pots, and door knobs

Use cleaning products that contain:
Chlorine, Alcohol,
Hydrogen Peroxide, Iodophors

Encourage employees to wash their hands
after coming in contact
with another person and
after touching unclean
surfaces.

Flagship Facility Services can help you stay healthy this flu season!
